ADMINISTRATION REPORT OF  
STD/AIDS CONTROL PROGRAMME - 1988

1. INTRODUCTION

The Sexually Transmitted Diseases are a group of diseases which are transmitted by sexual intercourse. These diseases may involve almost any part of the human body, but the majority of them can be cured if they are diagnosed early and if treatment is thorough. Ignorance and misunderstanding concerning the facts about these diseases are still very common in Sri Lanka, even in educated circles, and to overcome these problems successfully, it is essential that accurate, factual knowledge should be readily available.

2. PROBLEM

(a) Morbidity

515 new cases of 'Infectious Syphilis' and 2328 new cases of 'Gonorrhoea' were registered in the island's full-time clinics as compared with 465 and 2203 respectively in the previous year.

However, it is important to note that these figures show the trend of the clinics, but not a true picture of the incidence of S.T.D in Sri Lanka, as it is estimated that only 15-20% of those infected attend clinics. Others seek treatment from private medical practitioners and quacks.

The rate per 100,000 population for 'early infectious syphilis' was 3.1 as compared with 2.8 in the previous year.

The rate per 100,000 population for 'gonorrhoea' was 14.0 as compared with 13.5 in the previous year.

The Colombo clinics recorded a slight increase in Gonorrhoea, but a decline in 'Early Infectious Syphilis'.

There were 253 new cases of 'Early Infectious Syphilis' and 1116 new cases of 'Gonorrhoea' as compared with 277 and 999 respectively in the preceding year.

The 20-29 age group in the male section accounted for 60.0% of all cases of 'Early Infectious Syphilis' and 62.0% of all cases of 'Gonorrhoea' as compared with 61.5% and 62.5% respectively in the previous year (Table III)

The 10-19 age group accounted for 12.0% of the total cases of 'Early Infectious Syphilis' as compared with 6.3% in the previous year. 'Gonorrhoea' cases in this age group accounted for 7.8% of the total cases of Gonorrhoea as compared with 5.4% in the previous year.

Contact investigation and health education activities contributed to the attendance of 45.5% of the Early Infectious Syphilis and 47.4% of the cases of Gonorrhoea at the Colombo Clinics, as compared with 47.4% and 72.5% respectively in the previous year.

At the out-station clinics 262 new cases of 'Early Infectious Syphilis' and 1212 new cases of 'Gonorrhoea' were treated as compared with 188 and 1204 respectively in the previous year and increase of 39.3% in 'Early Infectious Syphilis' and 0.7% in 'Gonorrhoea'.

There were 09 new cases of 'Early Congenital Syphilis' and 17 new cases of 'Late Congenital Syphilis' as compared with 04 and 24 respectively in the preceding year.

In Colombo there were 946 new cases of 'Non Gonococcal Urethritis', while in out-station it was only 549.

Less cases of 'Herpes Genitalis' were seen at the Colombo Clinics than in the out-station clinics. In Colombo 372 new cases were registered for the year 1988, while at the out-station clinics it was 487.

11 new cases of 'Ophthalmia Neonatorum' were registered in the Colombo clinics, while at the out-station clinics 22 new cases were registered, when compared to 07 and 09 respectively in the previous year.

158 cases of 'Candidiasis' and 188 cases of 'Genital Warts' were diagnosed at the Colombo clinics, as compared to 88 and 125 respectively at the out-station clinics.

225 cases of 'B'lectamase' were diagnosed and treated at the Central V.D. Clinic.

Firstly, introduction of private practice and secondly, as some out-station full-time V.D. Clinics continued to function without the services of full-time medical officers and trained personnel - led to a drop in attendance.

To overcome this problem, medical officers and other para-medical staff who like to serve in the campaign for a specified period should only be appointed.

Secondly proper Health Education, should be given to the public, so that they could get proper and correct treatment when attending V.D. Clinics.

#### (b) Social Aspects

The highest attendance in the Colombo clinics recorded this year are traders and labourers. The traders accounted for 45.0% of all cases of 'infectious syphilis' and 35.8% of all cases 'Gonorrhoea' as compared with 21.3% and 23.5% respectively in the previous year. Labourers accounted for 44.0% of all cases of infectious syphilis and 32.5% of all cases of gonorrhoea as compared with 26.2% and 21.3% respectively in the previous year.

Prostitutes and Casual acquaintances together accounted for 39.0% of the sources of infection of cases of infectious syphilis and 53.0% of all cases of gonorrhoea, as compared with 57.9% and 53.0% respectively in the previous year.

Source of infection of homosexual origin were 10.5% for infectious syphilis and 3.8% for gonorrhoea as compared with 4.5% and 3.4% respectively in the previous year. These figures show a slight increase in homosexual behaviour in Sri Lanka.

### 3. ORGANIZATION

The Sexually Transmitted Diseases Control Programme in Sri Lanka is at present not well organised. The country is covered with a network of 12 full-time clinics. But very often those clinics do not function properly due to shortage of full-time medical officers to man these clinics.

"Health Care Delivery Programme" of the STD include detection of cases and treatment, contact investigations, contact tracing, tracing of defaulters, and all VDRL reactives, HIV antibody positives, antenatal blood testings, blood survey of vulnerable groups, health education and providing laboratory facilities for the investigation of cases of sexually transmitted diseases.

#### Change of Staff

1. Dr. R. Mahendran, Venereologist, CVDC retired from government service on 30.04.88
2. Dr. M. Balasubramaniam assumed duties on 08.01.88 as MO, VDC, Ragama
3. Mrs. H. Ariyawathie, Clerk AVDC transferred on 01.01.88 to RDHS Office Kalutara.
4. Mr. W.A. Gunasekera, Clerk VDC Badulla transferred to Civil Medical Stores Colombo on 01.01.88
5. Mr. A.J.M. Prematillake, Clerk assumed duties on 01.01.88 at VDC Badulla
6. Mr. Y. Dhanawardena assumed duties at VDC Katugastota as of 01.01.88
7. Mrs. M.E. Silva S/N CVDC retired from government service on 14.06.88
8. Mr. S.K. Edirisinghe assumed duties as PHI VDC Anuradhapura on 18.07.88
9. Mr. M.A. Sri Lal Perera, Clerk assumed duties at CVDC Colombo as of 26.07.88
10. Miss Tamara Jayasinghe, Clerk assumed duties at CVDC Colombo as of 12.12.88
11. Miss Thambiraje Indira, Clerk assumed duties at VDC Jaffna as of 15.11.88
12. Mr. H.D. Amarasinghe, Male Attendant VDC Kurunegala retired from government service as of 06.08.88
13. Mrs. Mallika Perera, Female Labourer AVDC Colombo vacated post On 01.06.88
14. Mr. R. Nadarajasingham, O/Labourer VDC Jaffna vacated post on 05.07.88
15. Mrs. S. Wijeweera, S/N assumed duties at CVDC Colombo on 18.01.88
16. Mr. R. Wasantha Kumara, Sanitary Labourer, VDC Katugastota vacated post on 02.04.88
17. Mrs. H. Swarnalatha assumed duties as MLT, CVDC Colombo on 01.01.88

#### 4. CO-ORDINATION

##### (a) Local Authorities

Routine blood testings of expectant mothers was continued at the ante-natal clinics in Colombo and Kandy Municipalities with the co-operation of the municipal authorities.

All cases reactive in the "Venereal Diseases Research Laboratory Test" (VDRL) were investigated and treated where necessary at the Colombo and Katugastota clinics (Tables IX & X).

This activity is further intensified with the V.D. Control Programme working in close collaboration with the "Family Health Programme".

##### (b) Voluntary Organizations

Regular Health Education Programmes were carried out with the co-operation of voluntary organizations.

Programmes of health education in "Sexually Transmitted Diseases" were carried out in Teacher Training Colleges, Universities and other training institutions, in Estates, Schools and Hotels.

The campaign participated in "Mahapola" and Gam-Udawa exhibitions, and in other exhibitions organised by Schools and other voluntary organizations.

#### 5. Activities

Regular control measures were carried out at all full time clinics. An analysis of cases is given in Tables II & XI.

##### (a) Preventive

Contact investigation was carried out in respect of all cases of infectious V.D. (Tables VII, VIIB & IV).

Routine blood testings of all admissions to "Remand Houses", "Prisons" and the "Training Schools for Youthful Offenders" were continued.

Blood surveys were carried out in Hotels and Prisons. Cluster surveys carried out among high risk groups. Also blood testings of Police personnel and Armed service personnel were carried out before recruiting.

Many a hidden sources of infection in the community has been brought into open for treatment, and follow-up as a result of magistrates referring cases for examinations and treatment at V.D. clinics.

Routine blood tests were continued at ante-natal clinics and maternity wards of hospitals in Colombo and out stations (Tables IX & X).

(b) Curative

The standard treatment for 'gonorrhoea' was procaine penicillin 4.8 mega units for both males and females, preceded by the administration of 1G probenecid orally.

All syphilis cases were treated with 'Benzathine Penicillin' 2.4 mega units for (S1,S2,S3) early infectious syphilis, 2.4 x 3 mega units for 'Early Latent Syphilis' cases, and 2.4 x 4 mega units for 'Late Latent Syphilis' cases.

All pregnant mothers with syphilis were treated with procaine penicillin 800,000 units IM x 12 to 21 depending on the stage of infection.

6. Educational

The training of medical and para-medical personnel in V.D. Control, was continued at the Central V.D. Clinic and at Katugastota V.D. Clinic.

Lecture demonstrations to various categories of health personnel in service and in training were continued.

Post graduates and under graduates of the Faculty of Medicine at Peradeniya, and Galle were given lecture demonstrations on V.D. and its control.

7. Laboratory Work

The laboratory services required for the activities of the Anti S.T.D. Campaign are provided by the Central Laboratory, in charge of a Bacteriologist. This serves as a routine and reference laboratory for the Colombo Clinic, and as a reference laboratory for all V.D. Clinics in the island, and also entertain reference work from any other hospital or general practitioners all over the island. In Katugastota, the laboratory work is under the control of the Venereologist.

The activities as for the diagnosis of 'Venereal Disease' concerned are supervised and controlled by the Central Laboratory which provides, control 'sera reagents' for serological and bacteriological work, and evaluates the performance of the tests. In all provincial laboratories the VDRL test is performed as a routine. Equipments and reagents necessary, are indented for and distributed by the Central Laboratory.

Dark ground microscopy, gram-staining for Gonococcal Examinations, Smear discharges for Trichomonasis vaginalis, routine urine examinations, W.BC/DC etc. are performed at each V.D. Clinic by the Pathologist or by the Venereologist in charge. The TPHA and the FTA tests are being satisfactorily carried out at the Central Laboratory.

The Enzyme Linked Assay method for testing for HIV was successfully performed in the Central Laboratory.

## 8. Achievements

Sero surveys for 'AIDS' were carried out in the areas of Gangodawila, Wathupitiwala and Colombo.

Blood Surveys for syphilis have been carried out in Estates and Hotels.

Training of Medical, para-medical personnel is being carried out.

Intensive health education activities have been carried out to educate the susceptible groups and the general public, by way of talks, lecture demonstrations, exhibitions and film shows, to get their co-operation in controlling V.D.

34,543 persons were tested for HIV during the year 1988 and 05 were found to be HIV antibody positive.

The island's ante-natal sero activity rate is 0.52% as compared with 0.54% of the previous year.

11 cases of 'Ophthalmia Neonatorum' were registered at the Colombo Clinic and 22 cases were reported from out-station clinics.

## 9. Special Studies, Research & Surveys

The diagnosis of 'Genital Herpes' was mostly made in clinical basis, and confirmed by culture technique, but as a rapid diagnostic method the 'Herpes', 'ELISA', test was introduced with the active co-operation of the Department of Microbiology, of the Faculty of Medicine in Colombo.

The ELISA test for the detection of antibodies against HIV, and confirmation of HIV ELISA positives by the 'Western Blot' test was also introduced in this year.

## 10. International Assistance

International Assistance was obtained for the 'AIDS' control programme. Surveys were carried out simultaneously in different high risk groups. All equipment necessary for the HIV antibody detection was presented by the W.H.O.

|                            | 1,83,000        |

12. Conclusion

V.D. control activities were maintained satisfactorily during the year 1988.

The attendance of new cases of 'Early Infectious Syphilis' and 'gonorrhoea' shows a slight increase - 'Infectious Syphilis' by 10.7% and 'Gonorrhoea' by 5.7%.

Colombo clinics registered a decline in 'Early Infectious Syphilis' by 8.7% but an increase in 'Gonorrhoea' by 11.7%.

The incidence of S.T.D is widespread today that the few investigating officers of the campaign alone cannot cope up with the problem effectively. It requires efforts over a wider front involving other public health personnel in the field. They should play a more active role in tracing contacts and referring them to the nearest V.D. Clinic for examination and treatment. Every delay in tracing a contact can result in several fresh chain of infection.

13. Acknowledgements

The Director Anti S.T.D Campaign wishes to place on record his deep appreciation of the encouragement and assistance he has received from the Department of Health Services as well as from outside, towards the S.T.D Control work.

TABLE VII

Contact Investigations - Extra Marital Contacts  
Colombo Central V.D. Clinic

No. of Patients Interviewed:

|                 |                     |     |
|-----------------|---------------------|-----|
| Syphilis Early: | S1                  | 16  |
|                 | S2                  | 92  |
|                 | S3                  | 37  |
|                 | S4 Early            | 57  |
| Syphilis Late:  | S4 Late, S5, S6, S7 | 99  |
|                 | Gonorrhoea          | 607 |

No. of Extra-marital Contacts - Named

|            |     |
|------------|-----|
| S1, S2, S3 | 43  |
| S4 Early   | 04  |
| Gonorrhoea | 118 |

No. of Extra-marital Contacts - Traced

|            |    |
|------------|----|
| S1, S2, S3 | 22 |
| S4 Early   | 03 |
| Gonorrhoea | 57 |

No. of Extra-marital Contacts - Brought to Clinic

|            |    |
|------------|----|
| S1, S2, S3 | 10 |
| S4 Early   | 03 |
| Gonorrhoea | 27 |

No. of Extra-marital Contacts - Found Positive

|               |    |
|---------------|----|
| S1, S2, S3    | 02 |
| S4 Early      | 03 |
| Syphilis Late | -  |
| Gonorrhoea    | 11 |

No. of Extra-marital Contacts - Treated

|                        |    |
|------------------------|----|
| Syphilis Early         | 05 |
| Syphilis Late          | -  |
| Gonorrhoea             | 11 |
| Presumptive Gonorrhoea | 17 |

1. Contact Index : (Approximate number of contacts obtained from each case of Primary and Secondary Syphilis Interviewed) : 0.22
2. Epidemiological Index : (Approximate number of 'Syphilis Infections' identified in the contacts of each primary and secondary syphilis patients interviewed) : 0.01
3. Brought to Treatment Index : (Approximate number of 'Syphilis Infections' brought to treatment among contacts of each primary and secondary patients interviewed) : 0.07
4. Lesion to Lesion Index : (Approximate number of Primary and secondary syphilis infections brought to treatment among contacts of each primary and secondary syphilis patients interviewed) : 0.01
